

 FusionPlastics
TANKS
Australian design
backed by 50 years
of German plastics
technology.

Design

With the latest in German design software we can offer a tank designed to your specific requirements to European standards DVS 2205 and EN 12573.

Sheet Butt Welding

With the recent commissioning of our new Wegener CNC sheet butt welding machine we are now capable of offering butt welded tanks with weld identification and traceability.

Tank Fittings

All tank fittings used are by George Fischer **+GF+**. These include:

- **+GF+** Valves, pipe and fittings.
- **+GF+** Site Glass assembly.
- **+GF+** SIGNET Level Sensors.

Fabricated Tank

All tanks are designed and fabricated under strict quality control to client specification. Tanks can be supplied with a design summary and test certificates for piece of mind.

What is RITA 2.0?

RITA 2.0 is a program for calculating freestanding, round and rectangular, non-pressurised thermoplastic tanks for the storage of liquids. RITA 2.0 takes into account the internationally recognised Standard DVS 2205 Part 1-5 of the DVS "Deutscher Verband für Schweißen und verwandte Verfahren e. V. (The German Welding Association for Welding and Associated Procedures)" in Dusseldorf.

As a result RITA produces a static printout with detailed description of the planned tank.
